

Collibra Data Governance

Unlock the value of your data, safely and at scale

Establish a foundation of trust, control, and access for data and AI initiatives

Fragmented data landscapes, growing data volumes and increasing regulatory pressures create a gap between what organizations want to achieve with their data vs. what they actually can. Without a solid, automated governance foundation, businesses struggle with data silos, inconsistent definitions and unknown data risks. This fragmentation blocks innovation and prevents teams from making confident, data-driven decisions.

Collibra Data Governance operationalizes governance workflows and processes, empowering organizations to manage their data as a strategic asset. It provides a business-led approach to data management, centralizing policies, standards and definitions. This creates a single source of truth, enabling teams to find, understand and trust their data while ensuring security and compliance across the entire data ecosystem.

“

Amidst the data deluge, one thing is paramount: trust. Trust in the pristine quality and unwavering accuracy of our data. That's why crafting a single source of truth and an ironclad data governance strategy stands as our critical mission.

Pavel Ermakov

Head of Data Excellence,

”

Achieve AI-readiness

Provide the essential foundation of high-quality, well-understood, and governed data required for successful and responsible AI deployment.

Increase operational efficiency

Eliminate wasted time spent searching for data, reconciling inconsistencies, and resolving data quality issues through a centralized, governed approach.

Accelerate decision-making

Empower teams across the organization to make faster, more confident decisions backed by trusted, easily accessible data.

Strengthen compliance

Proactively manage regulatory requirements and mitigate data-related risks with a clear, auditable governance framework.

Drive collaboration and data literacy

Foster a shared understanding through a common business language and collaborative tools to support both business and technical users.

Product highlights

Create a shared language

Drive a common, consistent understanding of business definitions by defining and managing key terminology, rules and metrics in one place.

Automate governance processes

Design and automate workflows for any data governance process, from issue management to policy approvals, to deliver business-driven governance.

Manage and enforce policies

Protect sensitive data and ensure regulatory compliance by centrally defining, managing and enforcing data policies.

Implement a flexible operating model

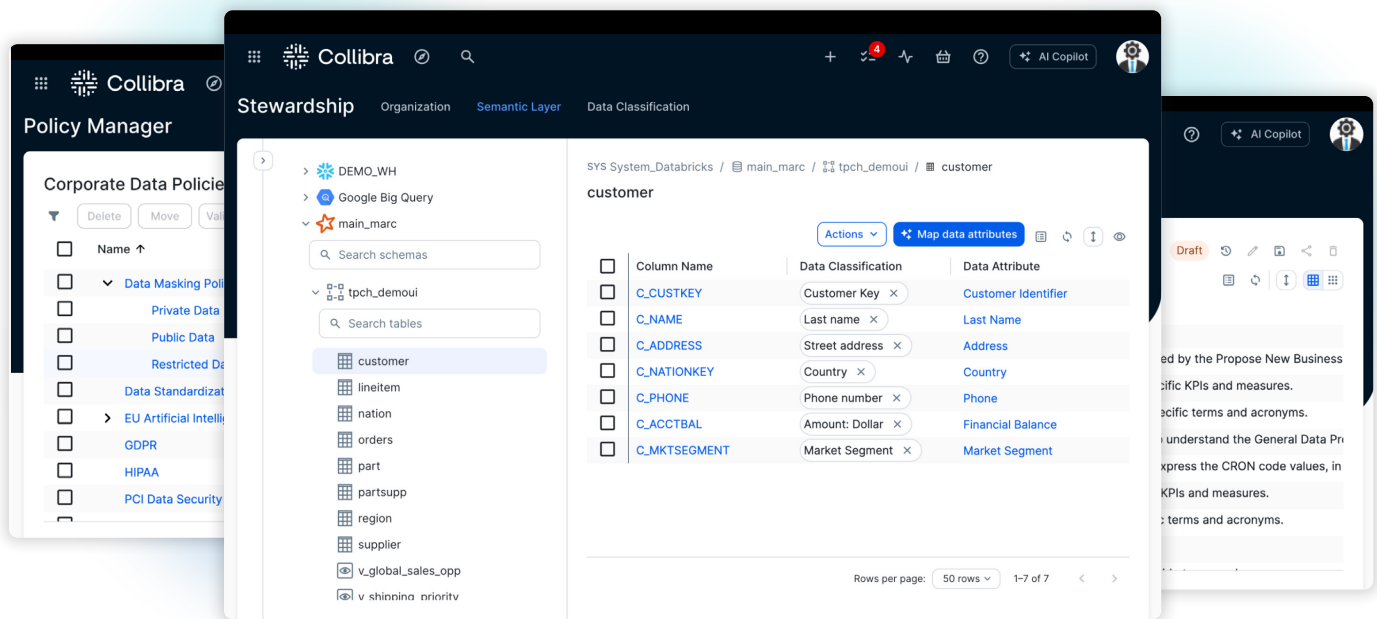

Adapt the platform to your organization's unique structure by configuring domains and communities to align with your business operations.

Assign clear accountability

Empower data stewards by assigning clear ownership and responsibilities for critical data assets directly within the platform.

Resolve data issues faster

Proactively manage data issues by submitting, tracking, and resolving them through the Data Helpdesk.
