

Data Steward Certification

Industry-recognized certification for experienced Collibra Data Stewards

Collibra is a single source of truth for diverse teams to discover, understand and trust data. By implementing data governance processes across the organization, data citizens can confidently make strategic, informed and data-driven decisions based on high-quality, compliant data.

Who should get certified?

This certification is for those who use a shared language to foster transparent collaboration with stakeholders in a central location.

Those responsible for:

Asset management

- Enrich assets within Collibra with features such as data classification and the AI description generator
- Create and maintain relationships between data assets within Collibra's Data Dictionary and Business Glossary
- Complete assigned tasks to progress assets through their lifecycle
- Maintain accurate and up-to-date metadata for assigned assets

Data governance

- Contribute to the development and documentation of data governance policies, standards and procedures
- Ensure adherence to data governance policies and standards for assigned data assets
- Act as a liaison between business users, IT and data teams to address data-related issues and questions

Collibra Platform management

- Test and validate Collibra updates and new features
- Identify opportunities to improve the efficiency and effectiveness of the Collibra

Collaboration and communication

- Collaborate with data owners, business users and IT teams to understand data requirements and ensure data quality
- Participate in data governance working groups and committees
- Communicate data governance policies and standards to stakeholders

Collibra certifications verify your deep knowledge of Collibra products and prove you're ready to apply your expertise. Collibra certifications can help you to get hired and receive the recognition you deserve.

Who's eligible?

- 3+ months of experience with the Collibra Platform
- Strong foundation of data governance principles and best practices
- Ability to communicate effectively with technical and business audiences
- Strong attention to detail and commitment to accuracy

Exam details

During the exam, the test taker will:

- Provide a government-issued ID to verify their identity
- Have 2 hours to complete approximately 60 multiple-choice questions
- Be proctored and recorded through Certiverse, our trusted certification vendor
- Use a lock-down browser provided by Certiverse that limits computer/software access

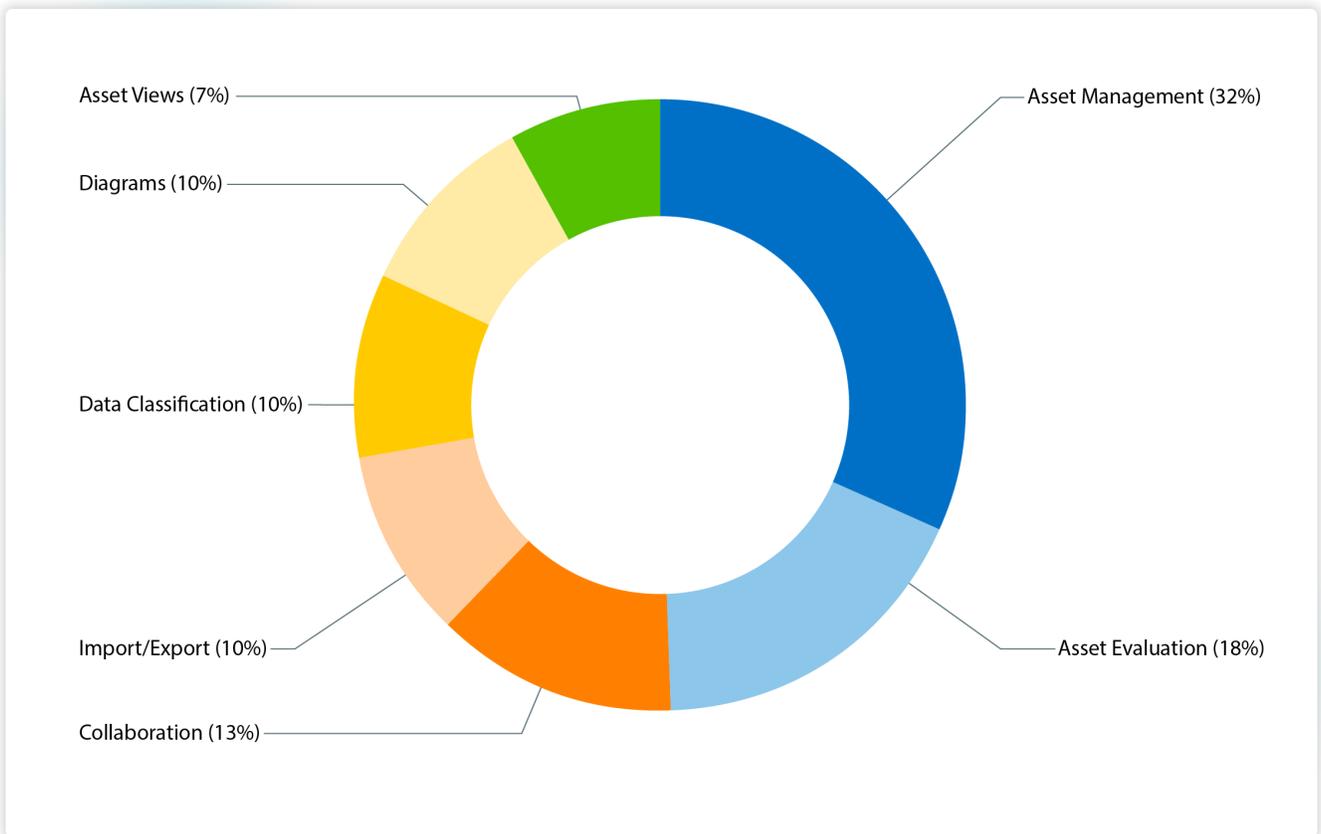

What does the exam cover?

The exam covers eight domains, each with associated tasks.

Exam cost
The exam costs \$125 USD, paid via credit card.

Premium Education membership includes two exam attempts.

Asset evaluation

- Describe the asset lifecycle and how it relates to articulation scoring
- Interpret validation results
- Interpret data profiling results
- Describe an articulation score
- Ensure data sets meet certification standards
- Analyze data flow with the technical lineage viewer

Asset management

- Create assets
- Enrich an asset by adding new information about it
- Create relations between assets
- Make an ingested catalog asset (e.g., a Report) more valuable by adding more context
- Improve understanding of ingested catalog assets (e.g., Report Attributes) by linking them to business terms
- Create asset descriptions using Collibra's AI description generator
- Use search filters to find assets
- Identify domain type based on asset type
- Resolve issues for assets that have since been modified in the data source
- Create or modify data sets based on defined requirements

Data classification

- Review ingested data and data classes
- Accept or reject Edge-suggested data classifications on columns
- Configure data classification thresholds

Asset views

- Use filters to create a new view with specific assets
- Create a new view using hierarchy paths and filters with AND/OR logic

Collaboration

- Rate, comment and ask a question about an asset
- Complete tasks
- Resolve asset issues or answer comments
- Run and participate in approval workflows
- Reassign tasks

Import/export

- Export assets and their characteristics
- Use a spreadsheet import to update attributes and relations in bulk
- Handle import errors

Diagrams

- Trace business lineage
- Build diagrams
- Create and edit a diagram view

Preparing for success

Those interested in obtaining this certification are strongly encouraged to take hands-on training in preparation for the exam. This can be completed either through self-paced learning (Path 1) or instructor-led training (Path 2). However, if you already have the recommended knowledge, you can enroll directly into the exam via university.collibra.com.

[Check your readiness](#)

Certification paths

There are two direct paths to certification. You can mix and match courses from each path.

Path 1: Self-paced learning

Customers: [A Data Steward learning path](#) is available to all customers and partners for this certification. It takes approximately 4 hours to complete the learning path. We also recommend having had hands-on experience prior to taking the exam.

Premium Education: Use the [Data Steward certification path for Premium members](#) to complete this certification. It includes the Data Steward learning path, virtual lab and certification exam. These activities require approximately 8 hours to complete.

Partners: Use the [Data Steward certification path for Partners](#) to complete this certification. It includes the Data Steward learning path, virtual lab and certification exam. These activities require approximately 8 hours to complete.

Path 2: Instructor-led training (private, public or combination)

Recommended courses

1. Collibra basics	5. Lineage and data classification
2. Asset governance	6. Traceability diagrams
3. Asset views and importing assets	7. Data lifecycle
4. Register data
