

Trusted data: Now playing in your favorite apps

Receive real-time notifications, share catalog assets and reply to comments

Search, share, and sync: Collibra for Microsoft Teams and Slack

Data governance is frequently viewed as a separate, cumbersome task that requires constant context switching between platforms. This friction between having a data question and receiving a trusted answer stalls productivity and creates bottlenecks in the governance lifecycle.

We are bringing the Collibra Platform directly into the tools your team already uses with new bi-directional integrations for Microsoft Teams and Slack. These integrations transform governance into a natural part of the daily workflow, allowing users to move beyond simple alerts to take immediate action. By embedding Collibra into your primary collaboration spaces, we eliminate friction and empower teams to engage with trusted data where they work.

Benefits

Collaborate in flow

Eliminate the need for constant context switching between Collibra and your collaboration tools, keeping users focused on their primary workflow.

Close the loop instantly

Enable users to search for and share trusted data assets within conversations, providing immediate context where questions arise.

Never miss a beat

Accelerate the governance lifecycle by allowing users to receive notifications and reply to comments directly from their chat interface.

Data at your fingertips

Foster a data-driven culture by lowering the barrier to entry for data governance, making it an intuitive part of the daily routine.

Product highlights

Bi-directional communication

Act on Collibra notifications instantly with write-back operations that save comments directly to the platform.

Instant notifications

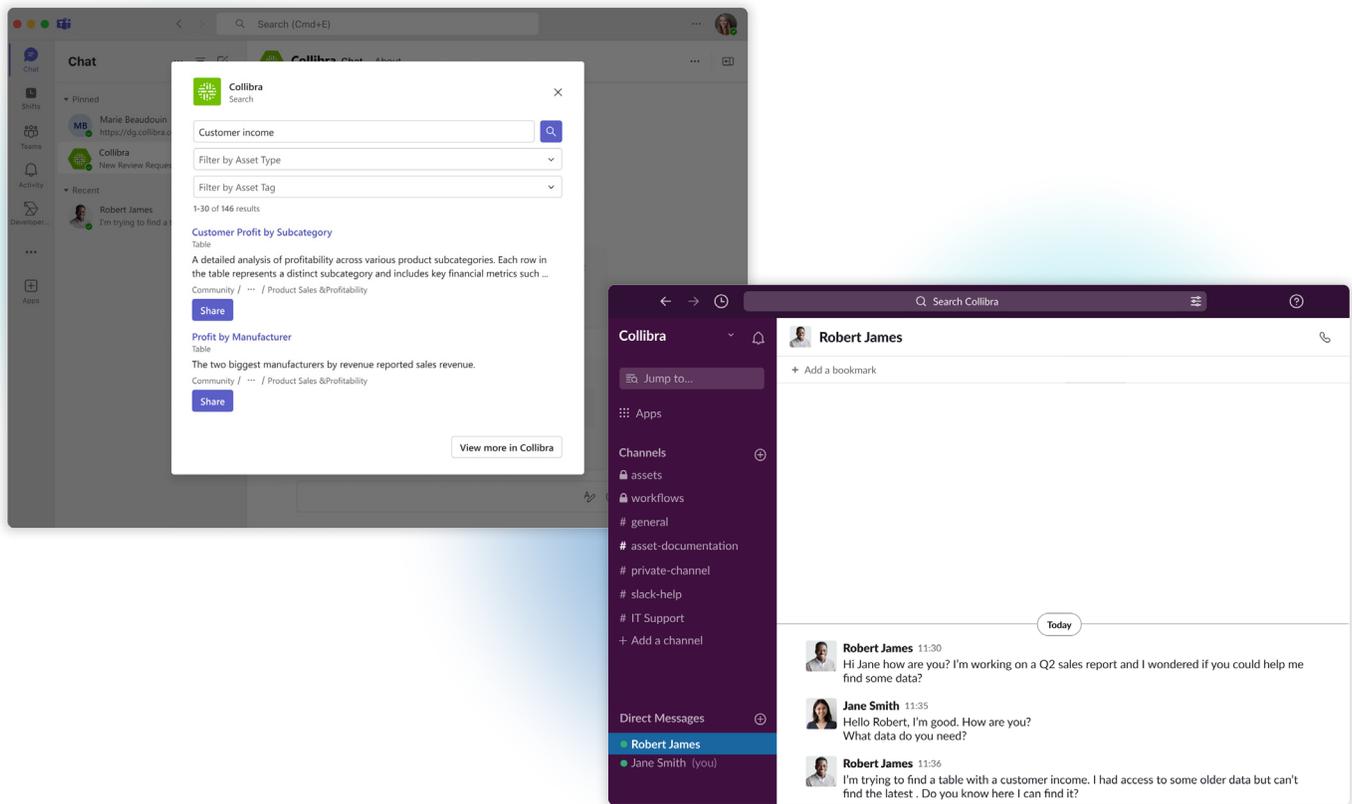

Receive direct alerts for @mentions, new comments and task lifecycle changes in your preferred tool.

In-app catalog search

Use the Collibra app to find official definitions, data owners and certified data assets within the chat interface.

Seamless asset sharing

Instantly share trusted data assets with colleagues to provide immediate context and clarity.

Easily search your data catalog to share data assets in Microsoft Teams and Slack
