

Collibra Data Marketplace

A curated storefront for trusted data products

Finding the right data is still the hardest part of using it. Consumers search across disconnected systems for days, the best data products sit buried instead of promoted and every access request disappears into a ticket queue or an inbox. Agents face the same wall with far more at stake: without a governed place to shop for trusted data products, they draw from any warehouse within reach, and ungoverned data quietly becomes the basis for decisions no one can trace back.

Collibra Data Marketplace gives agents and humans alike a curated storefront of trusted, ready-to-use data products they can discover, evaluate and access in one place. By pairing a tailorable, consumer-grade landing page and category-based discovery with direct asset-level access requests, it removes the friction between finding data and using it.

BENEFITS

Find trusted, ready-to-use data
A single enterprise storefront gives well-governed data products the visibility they were built for.

Discover and request in one flow
Access is requested on the asset itself, so nothing spills into separate tickets or inboxes.

Ground your agents in trusted data
Agents and humans shop the same governed storefront, so nothing is built on ungoverned sources.

Browse the way your business is organized
Assets group under domains people already recognize, such as Finance, Customer and HR.

Product highlights

Configurable landing page

A branded gateway to every accessible asset, available from the application menu and settable as a user's Collibra homepage.

Full data product context in one view

A side panel opens available data, consumption formats and quality scores alongside the definition and ownership so consumers judge fit without navigating away.

Category-based browsing

Custom groups of assets defined by administrators to fit your organization's businesses, each with its own name, icon, description and visibility scoped to specific roles or groups.

Integrated access requests

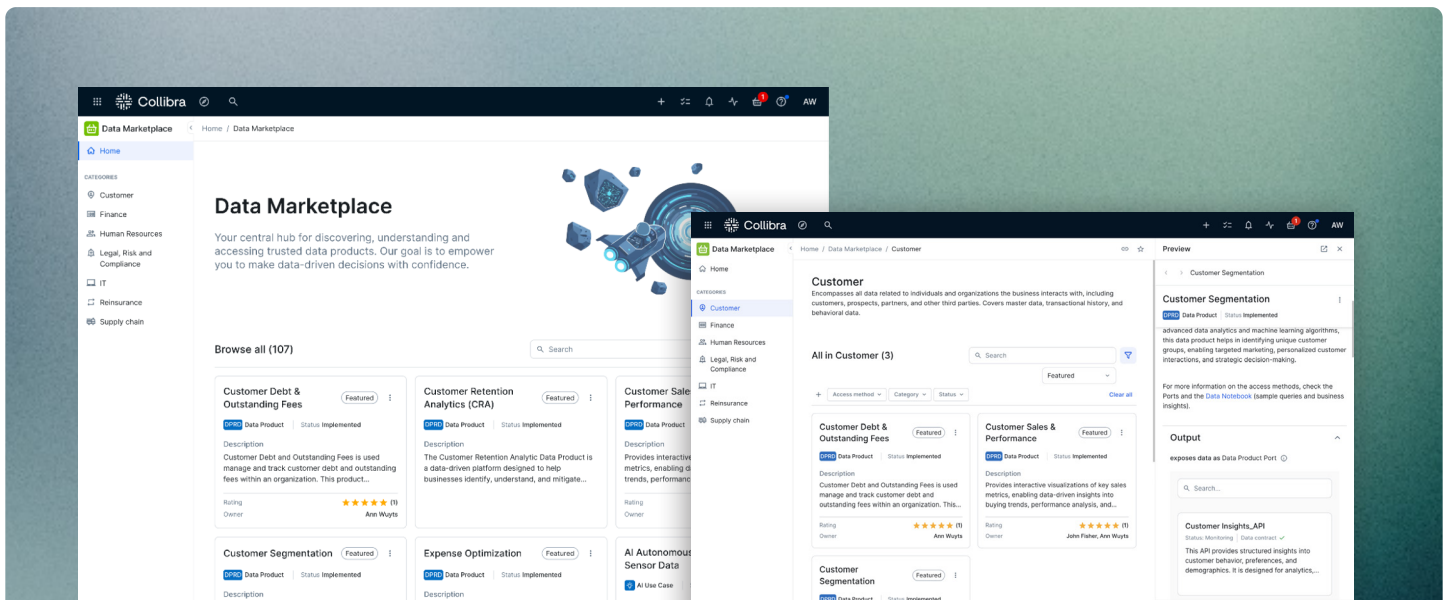

Access is requested on the asset itself, routed by configurable workflows that can grant approval automatically against pre-set criteria.

Featured assets

Curated picks rank first when browsing and filtering, and stand out in search results, so administrators can push a new data product the day it launches.

Scope-aware search with favorites

Search covers the whole marketplace from the landing page or a single category from its page, with favorited categories ranked higher.

Discover and access trusted data products through a shopping-style experience where you browse curated products, see quality, ownership and usage terms, and request access in a few clicks.
